

Program Summary

Fisheries

Overview

Monitor and collect fisheries data from commercial harvest. Fisheries research where directed by leadership and membership in support of their goals. Support consultation needs. Provide data to leadership for decision making. Support fisheries negotiations. Support commercial fishery.

Objectives and Services

Our objective is a sustainable fishery from a fish and fisher perspective that provides strong economic, cultural, and ceremonial opportunities for Nawash membership. We provide ice, and other support as requested. We provide technical support for fisheries decision making to leadership. We provide consultation support.

Target Audience

Fishers, membership, leadership, fisheries committee

Recent Developments

Due to pressing aquatic needs on Bruce Power file this has become a major component of our recent work. Have published many scientific articles and book chapters based on our cutting-edge research in fisheries, including lake whitefish declines.

Recent Limitations

Lost Louis Strezos as legal council for fisheries negotiations, as he has taken a new position as a judge. Krista Nerland and Cathy Gurgeis will be taking over the fisheries file. Both of these lawyers have been involved with SON on the fisheries file on the land and title claim.

Next Steps

December 13th there will be a fish stocking meeting to discuss the results from our work over the last few years including a report based off of the interviews with SON membership.

Community Engagement

Membership meetings, or come visit us at 50 Farm Road.
